ADJUSTAbench™

THE POWER OF INGENUITY

ADJUSTAbench™

ADJUSTAbench™ answers the need for optimized ergonomics in the assembly plant, the laboratory, the clean room —

wherever productivity goes up and absence rates go down in direct proportion to worker comfort.

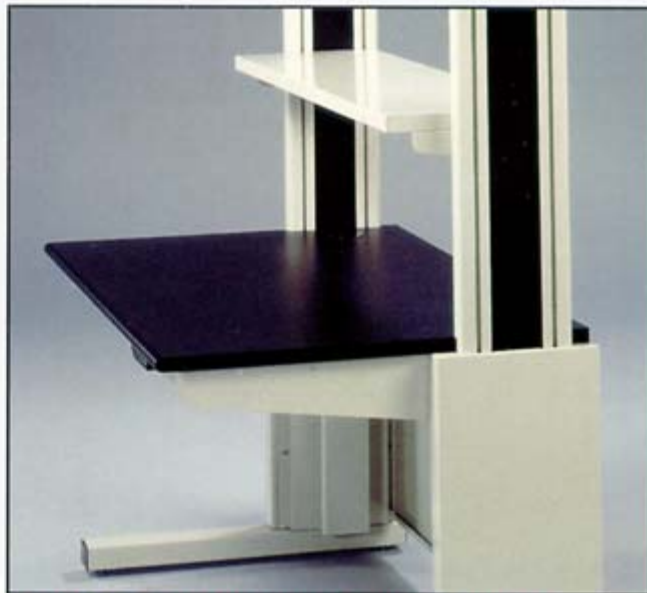

As the name implies, ADJUSTAbench permits adjusting the worksurface height — at the push of a button — to any dimension

within its **28" to 44" design range**. Smoothly and quietly assuming the technician's precise comfort setting, this unique furniture solution makes particular sense in multi-task or multi-user work environments.

Select from standard widths of **36", 48", 60", or 72"**, or **specify a custom workstation for your unique needs**. Choose from an extensive list of accessories to configure the unit for its particular assignment — shelving, powered back-splashes, utility raceways, swing arms, task lighting, hanging drawers, foot rests, tool bars, and more. And you can specify an ADJUSTAbench in a wide array of colors and laminate options.

If static's a concern, **specify the ESD worktop for total electrostatic discharge protection**. It comes complete with two grounding terminuses — one serving as the station's single grounding point, the other for continuity testing.

ADJUSTAbench is another example of **The Power of Ingenuity** found at Kewaunee, providing an efficient solution for maximizing productivity and worker comfort.

Shelf and worktop move as one, maintaining an ergonomic relationship. Intelligent column design provides infinite adjustment of accessories above the worksurface. Rugged, rectangular steel framing under the high-density laminate worksurface supports up to 1,000 pounds.

ADJUSTAbench can be programmed to recall three specific settings for quick, pre-set repositioning from shift to shift.

ADJUSTAbench's telescopic elevation mechanism is shielded within a protective housing. All metal components feature a durable, chemical-resistant finish.
